

How to setup your vm for port forwarding:

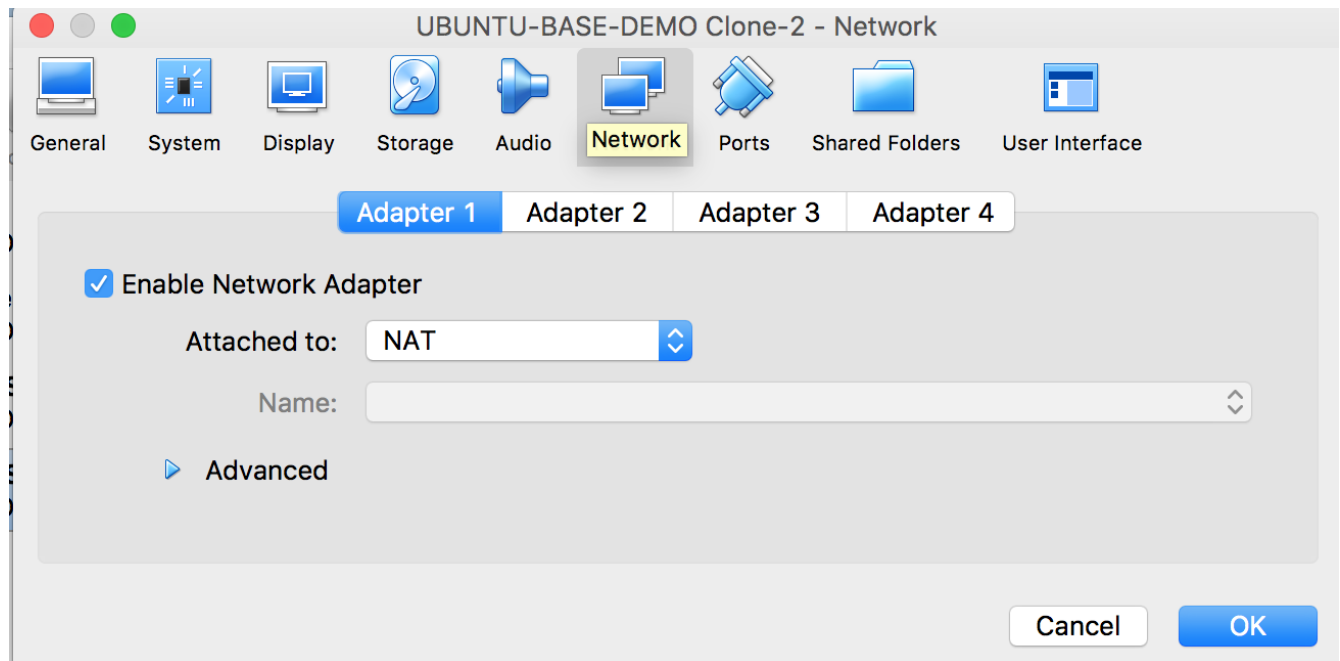

Open virtualbox:

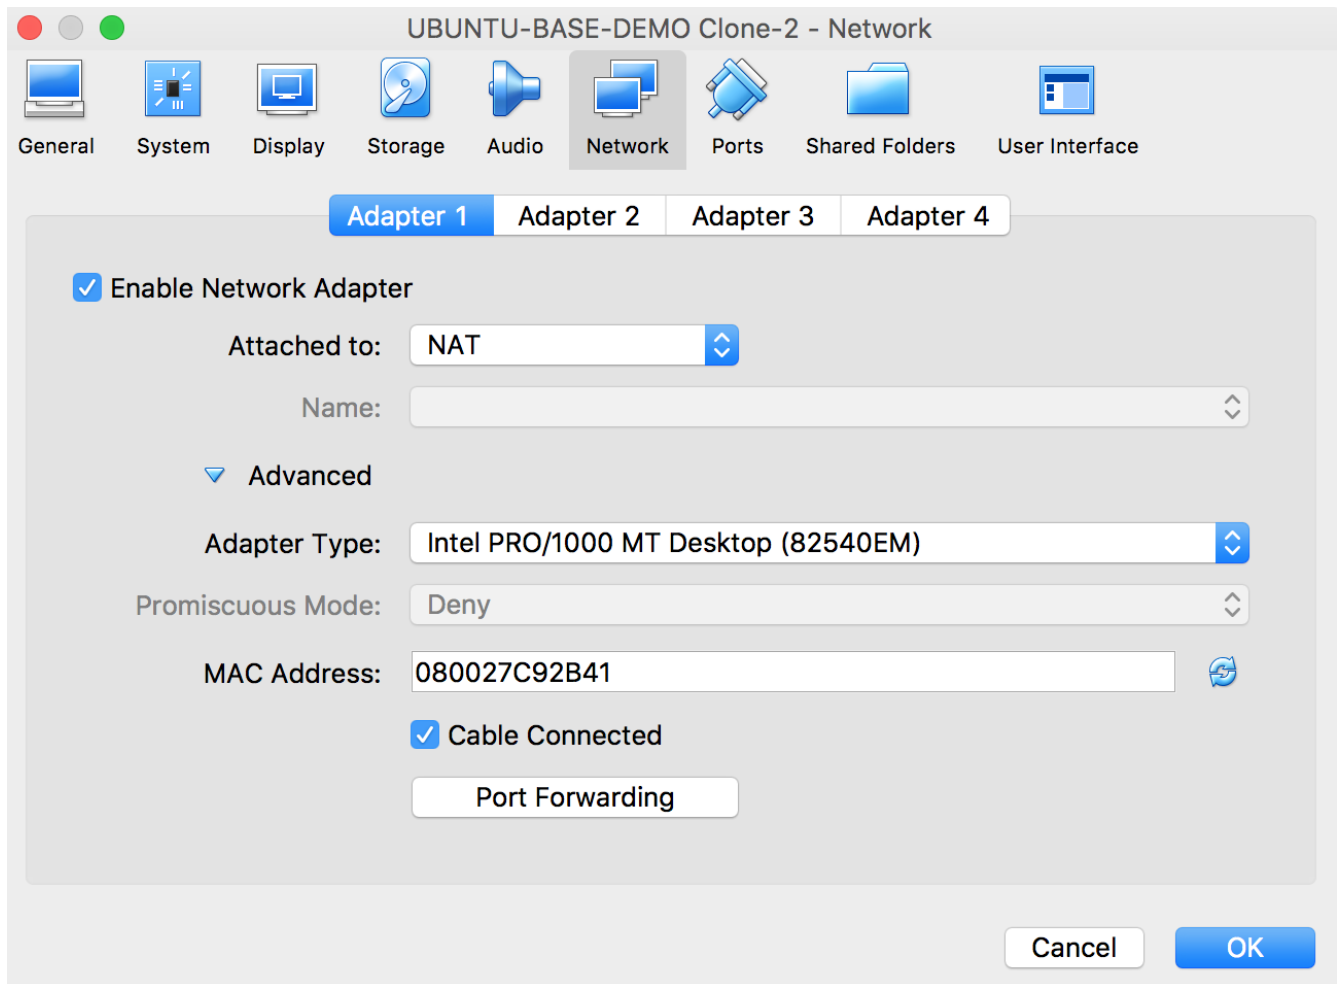

Click on settings

Go to network

Click on advanced

Click on port forwarding:

lan	Protocol	Host IP	Host Port	Guest IP	Guest Port
...	TCP		2000	10.0.2.15	22
...	TCP		2001	10.0.2.15	80

Put the IP address in of the guest machine (ubuntu box), forward ports 2000 & 2001 to ports 22 & 80  
Leave the guest IP blank,

Even if your IP address changes on the new ip will still forward.
